

Specifications

A flexible, pre-shaped device that is placed over a patient's nose and mouth to direct ambient air to the upper airway. Made of very soft and flexible non-conductive sterilizable materials; creates a gastight seal against a person's face.

Includes a 22 millimetre (mm) connector and is available in a range of sizes. It is attached directly to the resuscitator and held in place by the operator.

Materials: Dome: polysulphone
Cuff (rim): silicone or natural rubber connector, silicone rubber.

Components: Masks are made in two parts:

- A transparent dome or rigid moulded shell.

- Rim (cuff) cushion with inflation tube and stopper.

- Connection: 22mm ISO connector.

Can be totally dismantled for cleaning and sterilization.

Autoclaved at 134°C for 18 minutes for silicone; 121°C for rubber.

- Size to be clearly marked on each dome or shell.

Unit presentation:

1 mask, reusable, in plastic bag.

Packaging:

1 unit, in protective wrapping with manufacturer's name, product description and reference number, lot number and CE mark and reference number of notifying body. Maintenance manual, multilingual: English, French and Spanish, others when available.

Other:

Complies with *Medical Device Directive 93/42/EEC*, class IIa

XANEREAM1FM0

Paediatric mask with boring tub, transparent dome with inflating rim for small children with a body weight of approximately 15kg (approx 3 years) to be used with resuscitator Ambu Mark III & IV.

The mask is designated to limit ventilation pressures to approximately 40cmH₂O (4kPa).

Weight ±31g

XANEREAB1FM0

Paediatric mask without a boring tub, transparent dome, and inflatable; to be used with the Resuscitator Baby R, Mark IV baby or paediatric breathing circuit.

Weight: ±30g

XANEREAM1FM2/4/5 Manufacturer Ambu®
Size: 2, weight ± 50 g, for child
 4, weight ± 65 g, for adolescent
 5, weight ± 61 g, for adult
