

Specifications

X_RAY FILM HANGER

A clip-type hanger used in the manual processing of X-ray film sheets.

Drop-down construction, comprised of four clips fixed at each corner of a stainless steel frame. The clips have an interlocking design (that can be open) for accurate alignment and better washing.

X-RAY Clip and Film processing hanging clip

Made of aluminium or stainless steel, with hanging possibility through the clip wire handle. The hanging device should have a large hole or eyelet permitting a hanging line to pass through it.

When not available, common metal paper clips are an acceptable alternative:

Note: Plastic or wooden pegs are not suitable as they do not adequately secure the film to the drying line.
